

Grade 10 MPM2D

Ontario Educational Resources Bank (OERB) Activities

Analytic Geometry	
Activity	Description
<p style="text-align: center;">Linear Systems at the Theme Park</p> <p style="text-align: center;">Investing Problem Continued</p>  <p style="text-align: center;">Resource ID: ELO1105610</p>	<p>Practise full variety of concepts and vocabulary related to linear systems by reviewing some key terminology and answering a set of multiple choice questions involving solving systems graphically and by the algebraic methods of substitution and elimination.</p>
<p style="text-align: center;">Analytic Geometry Reviewer</p>  <p style="text-align: center;">Resource ID: ELO1099660</p>	<p>Practise variety of analytic geometry concepts by answering a set of multiple choice questions involving midpoint and length of a line segment, equations of lines and circles and the properties of geometric shapes.</p>
<p style="text-align: center;">Discovering Distance</p>  <p style="text-align: center;">Resource ID: ELO1098330</p>	<p>Develop understanding of the distance formula by discovering how it is related to the Pythagorean Theorem. Practise finding the length of a line segment from two given points by working through a provided template.</p>
<p style="text-align: center;">Discovering Midpoints</p>  <p style="text-align: center;">Resource ID: ELO1096550</p>	<p>Develop understanding of the midpoint formula by viewing a detailed explanation of how it is derived. Practise finding the midpoint of two given points by working through a provided template.</p>

Ontario Educational Resources Bank (OERB) Activities

Trigonometry																									
Activity	Description																								
<p style="text-align: center;">The World of Trigonometry</p> <p style="text-align: center; font-size: small;">The World of Trigonometry</p> <p style="font-size: x-small;">Fill in the chart by dragging the term to the appropriate spot. Some terms may be suitable for more than one location.</p> <div style="text-align: center; margin-bottom: 5px;"> angle </div> <table border="1" style="width: 100%; border-collapse: collapse; font-size: x-small;"> <thead> <tr style="background-color: #ffff00;"> <th>Mathematical Term</th> <th>Type of Triangle</th> <th>What can it find?</th> <th>What information is needed?</th> </tr> </thead> <tbody> <tr style="background-color: #e0ffe0;"> <td></td> <td>right triangle</td> <td></td> <td>two sides angle and hypotenuse angle and opposite side hypotenuse and opposite side</td> </tr> <tr style="background-color: #e0ffe0;"> <td></td> <td>right triangle</td> <td></td> <td>angle and hypotenuse angle and adjacent side hypotenuse and adjacent side</td> </tr> <tr style="background-color: #e0ffe0;"> <td></td> <td>right triangle</td> <td></td> <td>angle and adjacent side angle and opposite side opposite side and adjacent side</td> </tr> <tr style="background-color: #e0ffe0;"> <td></td> <td>any triangle</td> <td></td> <td>two angles and one side that is opposite one of the angles two sides and one angle that is opposite one of the sides</td> </tr> <tr style="background-color: #e0ffe0;"> <td></td> <td>any triangle</td> <td></td> <td>two sides and the angle located where the two sides meet (between the two sides) all three sides</td> </tr> </tbody> </table> <p style="text-align: center; font-weight: bold; margin-top: 10px;">Resource ID: ELO1098500</p>	Mathematical Term	Type of Triangle	What can it find?	What information is needed?		right triangle		two sides angle and hypotenuse angle and opposite side hypotenuse and opposite side		right triangle		angle and hypotenuse angle and adjacent side hypotenuse and adjacent side		right triangle		angle and adjacent side angle and opposite side opposite side and adjacent side		any triangle		two angles and one side that is opposite one of the angles two sides and one angle that is opposite one of the sides		any triangle		two sides and the angle located where the two sides meet (between the two sides) all three sides	<p>Practise solving triangles first by selecting the appropriate trigonometric formula (Pythagorean theorem, sine, cosine, tangent, sine law or cosine law) that is required. Then, by solving real-life measurement problems that require these formulae.</p>
Mathematical Term	Type of Triangle	What can it find?	What information is needed?																						
	right triangle		two sides angle and hypotenuse angle and opposite side hypotenuse and opposite side																						
	right triangle		angle and hypotenuse angle and adjacent side hypotenuse and adjacent side																						
	right triangle		angle and adjacent side angle and opposite side opposite side and adjacent side																						
	any triangle		two angles and one side that is opposite one of the angles two sides and one angle that is opposite one of the sides																						
	any triangle		two sides and the angle located where the two sides meet (between the two sides) all three sides																						
<p style="text-align: center;">Naming is Everything</p> <div style="border: 1px solid gray; padding: 5px; font-size: x-small;"> <p>Naming is Everything</p> <p>If the other acute angle was selected, then the opposite and adjacent sides would be named differently.</p> <p>It also doesn't matter the order the sides are named.</p> <p>Click the following to watch each side get labelled.</p> <ul style="list-style-type: none"> hypotenuse opposite adjacent  </div> <p style="text-align: center; font-weight: bold; margin-top: 10px;">Resource ID: ELO1087860</p>	<p>Practise right triangle terminology in preparation for the primary trigonometric ratios by naming the sides of right triangles according to the selected angle.</p>																								
<p style="text-align: center;">Invasion of PI</p> <div style="text-align: center;">  </div> <p style="text-align: center; font-weight: bold; margin-top: 10px;">Resource ID: ELO1098350</p>	<p>Practise solving right triangles by selecting the appropriate theorem, tool or law to be used and then solving for the unknown measure in a given triangle.</p>
